

# Fuse Net

This is the report on hyperparameter tuning of the fuse net deep neural network. The implementation of the model was a part of assignment 3 of the course CS6886.

Shreyas Shandilya

## Run Metrics

The following charts depict the logged metrics and hyperparameters. A total of 9 run were performed over a total run time of 14 hours and 57 minutes. The hyperparameters involved were:

- batch size
- learning rate
- optimizer
- optimizer specific hyperparameters
- learning rate reduction factor

The optimizers used were:

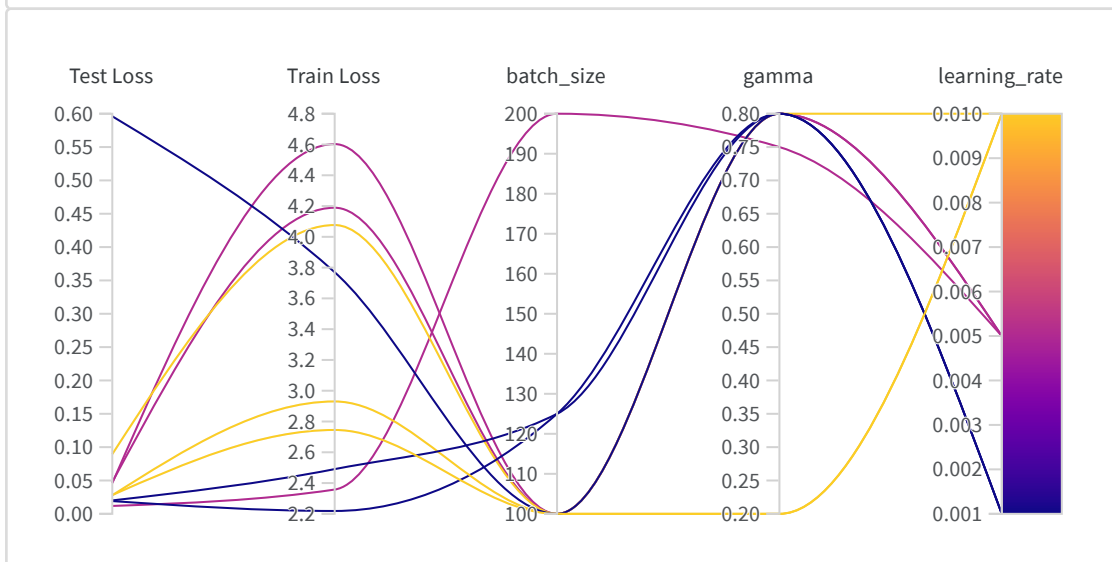

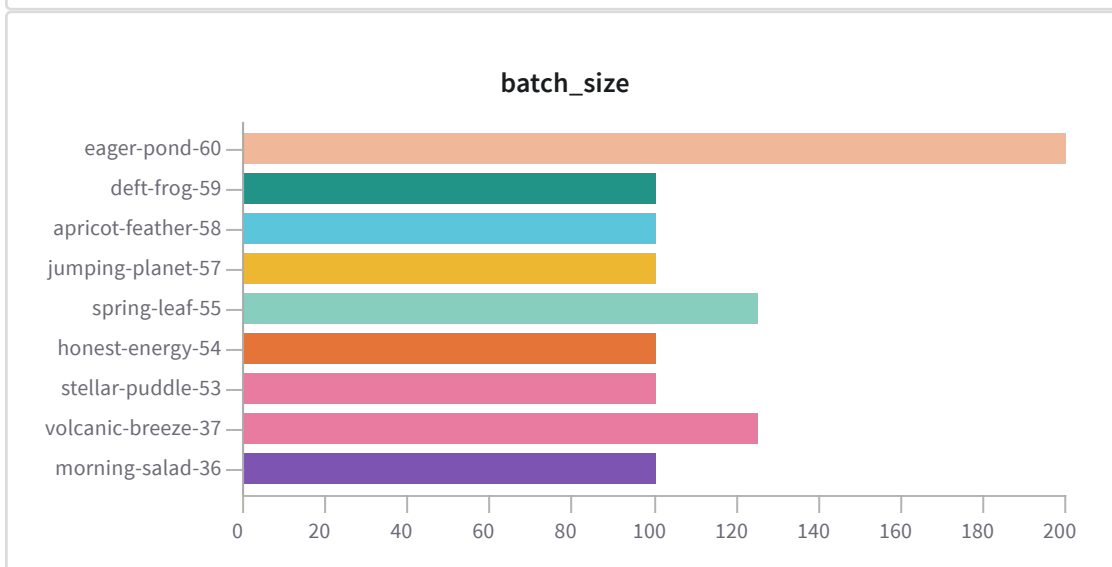

- Adam
- SGD

SGD has specific hyperparameter called momentum. Adam has 3 specific hyperparameters for numerical stability and weighing of gradients.

All 9 instances of training involved the use of a "Reduce on Plateau" Learning Rate Scheduler.

The following metrics were logged:

- Train loss
- Average Train loss across an epoch
- Test loss
- Learning Rate

<input checked="" type="checkbox"/> Run set 9				
Name (9 visualized)	State	Notes	User	Tag

1-9▼ of 9 < >				

The best model obtained was able to reach a maximum accuracy of 40% (39.92%) on the test set of CIFAR100 dataset.

Created with  on Weights & Biases.
